

KORELASI (Spearman)

Aryan Eka Prastya Nugraha, S.E., M.Pd
2021

RULES

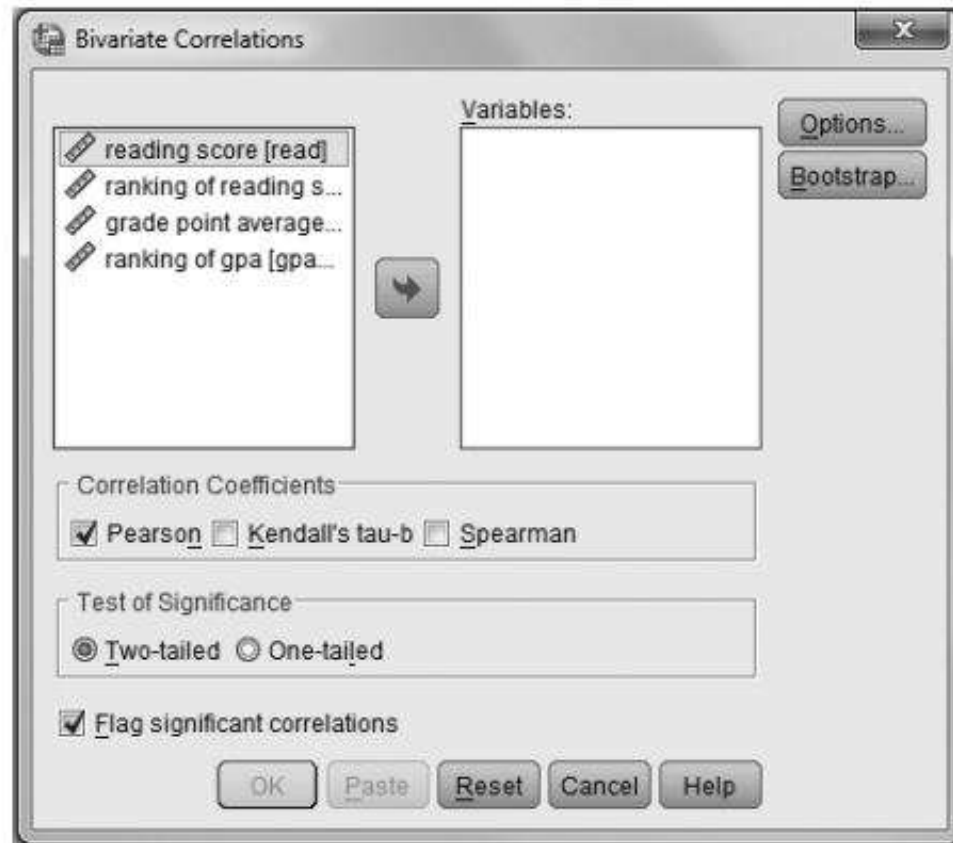

1. PJ mata kuliah wajib mempersiapkan perlengkapan sebelum proses pembelajaran
2. Membawa Laptop (optional)
3. Terpasang Software SPSS
4. Terkoneksi Internet
5. Mengumpulkan *hasil praktik* selesai perkuliahan di SIP

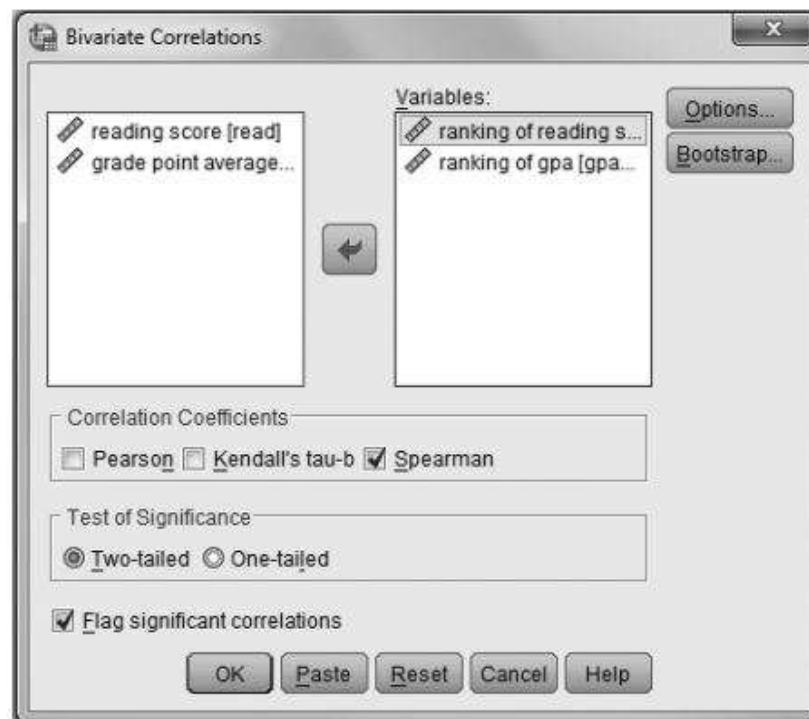

Example 2: Spearman Rank Order Correlation Coefficient

For this example, the same data set will be used. However, the rank order of the two variables (READ_RANK, GPA_RANK) will be used instead of their actual values as recorded. Thus, the computation for this coefficient is not sensitive to asymmetrical distributions or to the presence of outliers.

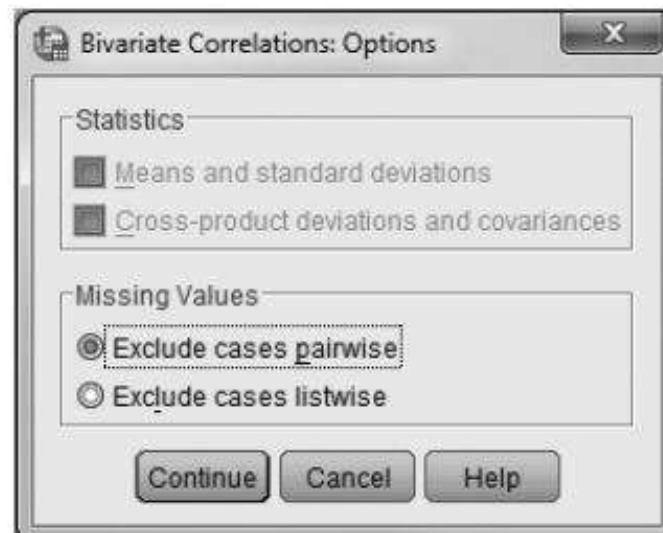

1. From the menu bar, click **Analyze**, then **Correlate**, and then **Bivariate....**
The following **Bivariate Correlations** window will open.

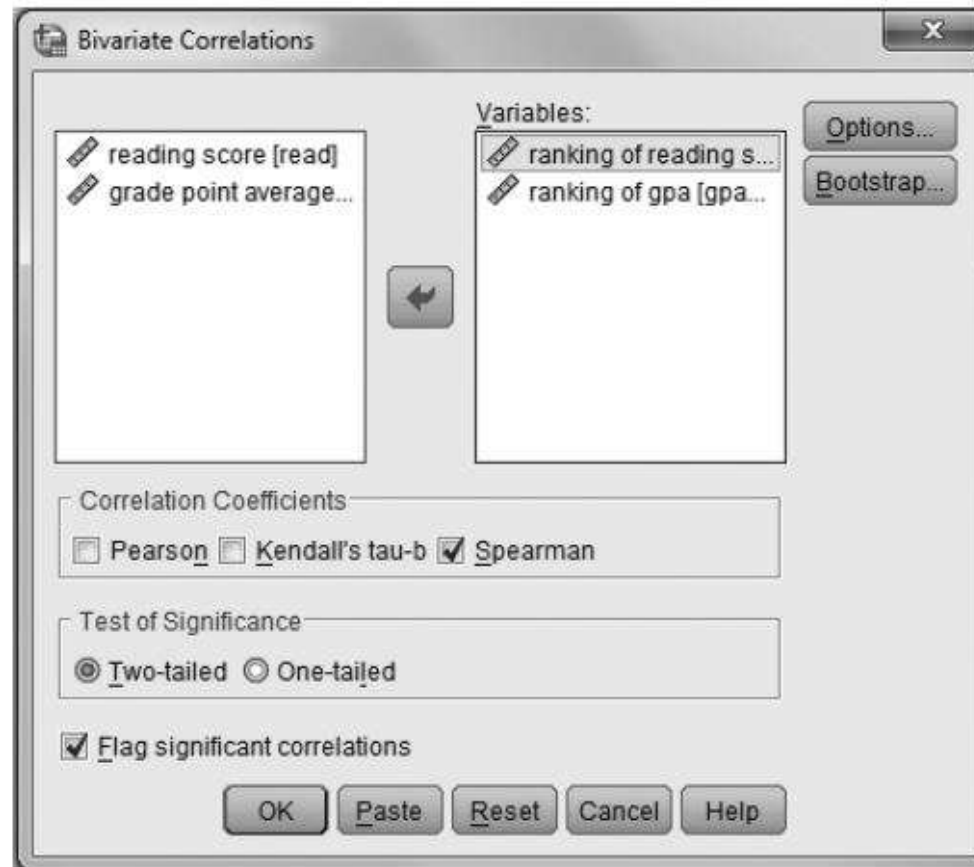

2. Transfer the **READ_RANK** and **GPA_RANK** variables to the **Variables:** field by clicking (highlight) them and then clicking . By default, SPSS will employ the **Pearson correlation analysis** (this field is checked). Uncheck the **Pearson** field and check the **Spearman** field.

3. Click **Options...** to open the **Bivariate Correlation: Options** window. Ensure that the **Exclude cases pairwise** field is checked.

4. Click **Continue** to return to the **Bivariate Correlations** window.

SPSS Output

Spearman Rank Order Correlation

| Correlations | | | Ranking of Reading Scores | Ranking of gpa |
|----------------|------------------------------|-------------------|------------------------------|----------------|
| Spearman's rho | ranking of reading scores | Correlation | 1.000 | .826** |
| | | Coefficient | . | .000 |
| | | Sig. (2-tailed) N | 15 | 15 |
| | ranking of gpa | Correlation | .826** | 1.000 |
| | | Coefficient | .000 | . |
| | | Sig. (2-tailed) N | 15 | 15 |

** Correlation is significant at the 0.01 level (2-tailed).

Results and Interpretation

The obtained Spearman rank-order coefficient ($\rho = 0.826, p < .001$) is highly similar in magnitude and direction to that in the Pearson correlation table. Thus, similar to the Pearson coefficient, the Spearman coefficient indicates that as the students' ranked reading scores increase, so do their ranked grade point average scores.
